OIL MONITOR

As of 22 September 2026

WORLD OIL PRICES

September 14-18, 2026, Trading Days[1]

Week-on-week, Dubai crude prices increased by approximately US$8.50 per barrel. International prices of gasoline and diesel also increased by around US$9.50 per barrel and US$18.60 per barrel, respectively.

Crude Oil Prices

Crude prices strengthened week-on-week as uncertainty over Middle East oil supplies weighed on market sentiment. Saudi Arabian crude loadings from the Red Sea port of Yanbu have been suspended since September 12 following attacks on the East-West Pipeline prompting the rerouting of Saudi crude flows through the Strait of Hormuz. Saudi Aramco also committed crude for lifting off the Omani coast as an alternative route, while US commercial crude inventories declined during the week to September 11, reaching a six-week low.

Improving crude rerouting options and easing supply concerns could weigh oil prices in the near term, although tight inventories and ongoing disruptions in the Middle East are likely to keep market volatility elevated. Chinese crude demand will also be a key watchpoint.

Asian Gasoline Market

Asian gasoline market firmed during the week amid strong demand from Indonesia and concerns over crude supply disruptions in the Middle East. Indonesia's Pertamina purchased gasoline for late-September loading and was also seeking additional volumes for October. Higher blendstock costs also contributed to the widening spread between gasoline grades.

Gasoline prices are likely to keep supported by steady import demand from Indonesia and supply disruptions linked to the Middle East. Malaysia’s domestic demand for RON 95 could also increase following the restoration of the monthly Budi Madani subsidized fuel quota to 300 liters from 200 liters effective September 1.

Asian Diesel Market

Diesel prices edged higher week-on-week as the market was supported by concerns over tightening regional supply, particularly amid escalating Russia-Ukraine hostilities. The latest attack on Russia’s Syzran refinery reduced prospects for a near-term easing of Russian diesel export restrictions. Russian diesel and gasoil exports also declined during the week ended September 10 following the extension of export restrictions amid an ongoing domestic fuel shortage.

Asian diesel fundamentals are likely to remain supported by uncertainty over Chinese October export volumes and continued disruptions to Russian supply. The ongoing Russian export restrictions could keep regional diesel supplies tight, although steady exports from North Asia and softer demand in parts of Southeast Asia could limit further market tightening.

FOREIGN EXCHANGE

The week-on-week average of the Philippine peso depreciated against the US dollar by Php 0.17 to Php 62.78 from Php 62.60 in the previous week.
