OIL MONITOR

As of 29 September 2026

WORLD OIL PRICES

September 21-25, 2026, Trading Days[1]

Week-on-week, Dubai crude prices decreased by approximately US$11.80 per barrel. International prices of gasoline and diesel also decreased by around US$3.15 per barrel and US$16.50 per barrel, respectively.

Crude Oil Prices

Crude prices remained broadly stable during the week as progress in diplomatic efforts to ease the conflict in the Middle East tempered concerns over supply disruptions. Iranian President Masoud Pezeshkian said Iran remained open to diplomacy to end the conflict. Meanwhile, signs of a possible resumption of flows through Saudi Arabia's East-West crude pipeline emerged, with increased shipping activity observed at the Red Sea port of Yanbu. On the demand side, China's crude imports are expected to remain subdued amid elevated oil prices, while US crude inventories increased during the week.

Crude prices are likely to remain volatile as the market continues to assess developments in the Middle East and the prospects for renewed supply disruptions. A potential resumption of the East-West pipeline could provide additional supply to the market, while subdued Chinese crude demand could weigh on prices.

Asian Gasoline Market

Asian gasoline prices were rangebound week-on-week amid firm regional demand and continued concerns over the impact of the Middle East conflict on Chinese gasoline exports. China's gasoline exports are expected to remain low in October as supply constraints continue to limit refining activity, while demand is expected to increase during the country's National Day holiday (Golden Week). Indonesia was also heard seeking additional gasoline volumes for November-December delivery, indicating continued buying interest in the region.

Gasoline prices could remain supported by firm regional demand, particularly with higher seasonal consumption expected in China and India. However, continued supply constraints in China and uncertainties surrounding Middle East developments may result in mixed market sentiment in the near term.

Asian Diesel Market

Asian diesel prices softened during the week following clarification from the US that an export ban was not being considered, although restrictions on diesel exports were being assessed amid surging pump prices. Meanwhile, US ultra-low sulfur diesel inventories declined to a four-week low, driven by lower Midwest stocks and stronger harvest-season demand. Arbitrage opportunities to the West of Suez also emerged as European buyers sought replacement barrels from Asia amid reduced US availability, with cargoes reportedly moving from the East to Turkey.

Asian diesel fundamentals are likely to remain supported by uncertainty over Chinese gasoil export volumes amid continued Middle East tensions. Winter heating demand and the extended restrictions on Russian diesel exports could further support the market in the coming month, while increased Asian flows to Europe may provide an additional source of regional demand.
